

Materna

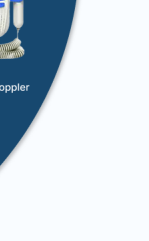

Project Overview

The Maternity Connected Care System aims to transform how expectant mothers and healthcare providers communicate. This platform makes it easy for patients to consult doctors and get quick advice, while helping healthcare professionals better manage patient relationships. It provides full pregnancy tracking and maternity services. Overall, this system ensures a more personalized and supportive experience, leading to better health outcomes for all mothers.

Quantitative Data

Almost 50% of the total pregnancies in India are High risk pregnancies

Almost all high risk pregnancies require close monitoring of health to avoid any complications

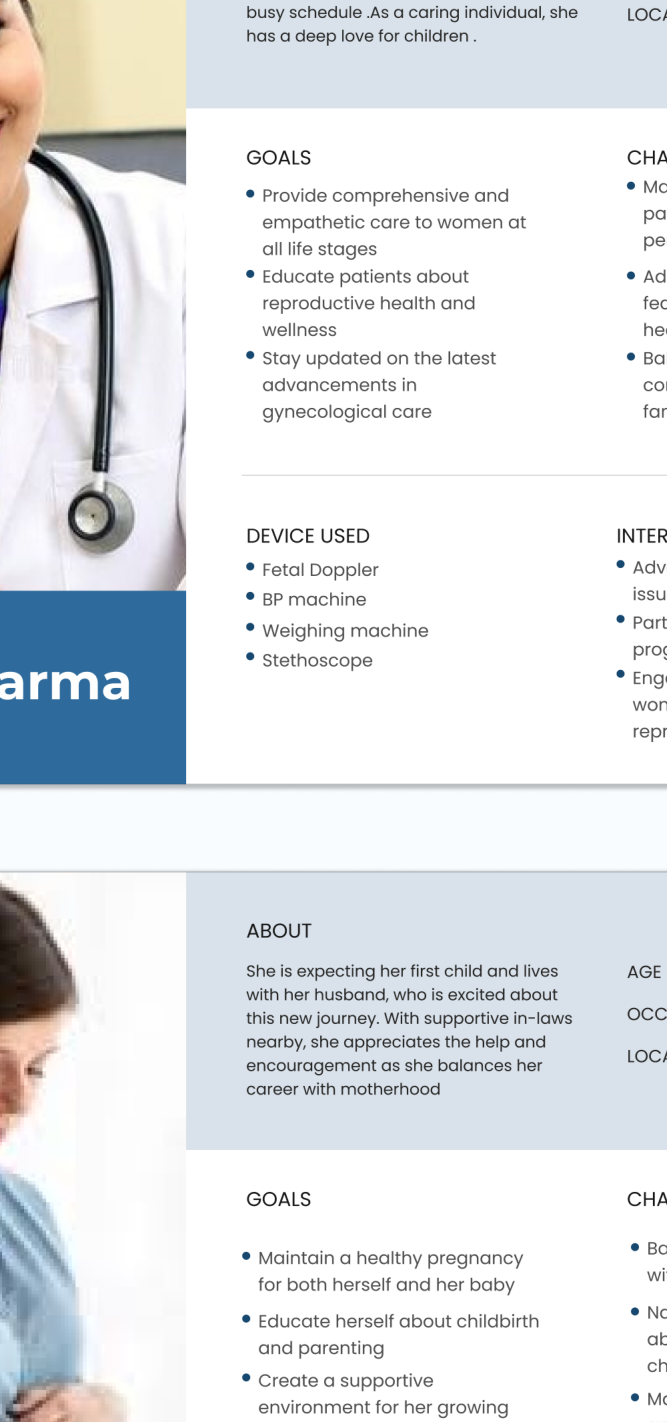

Doctors involved during a pregnancy

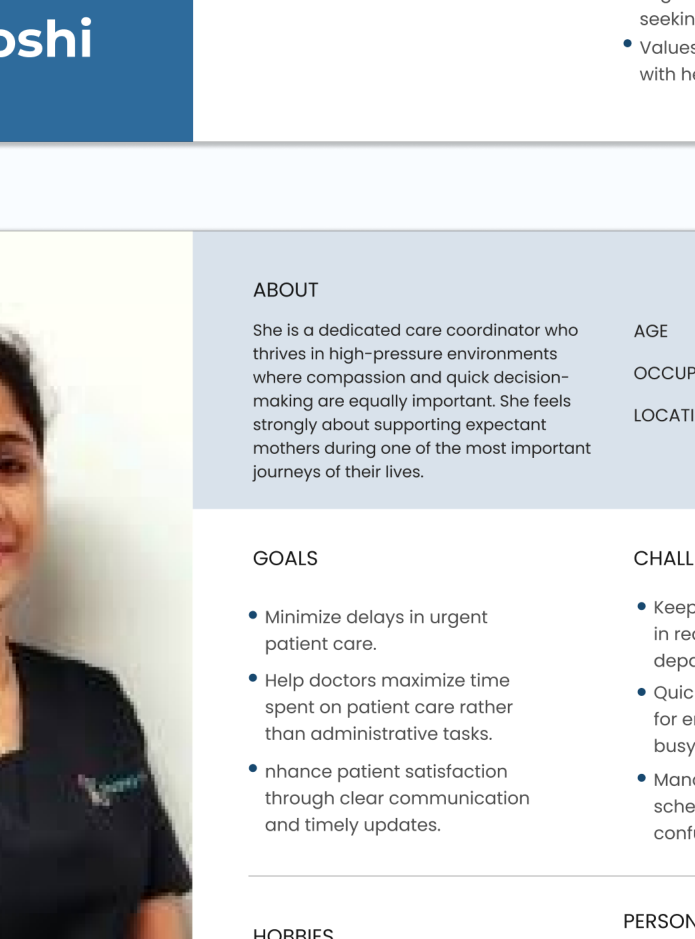

Only 20% of pregnant women in India are aware about maternity care applications

Ecosystem

AGE

38

EXPERIENCE

10+

LOCATION

Pune, Maharashtra

GOALS

- Provide comprehensive and empathetic care to women at all life stages
- Educate patients about reproductive health and wellness
- Stay updated on the latest advancements in gynecological care

CHALLENGES

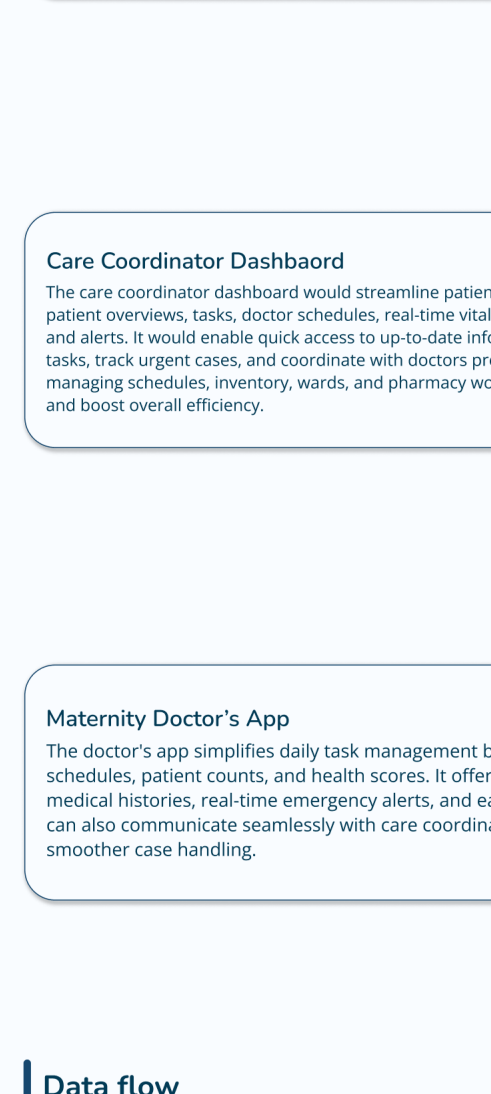

- Managing a high volume of patients while ensuring personalized care
- Addressing misconceptions and fears related to gynecological health
- Balancing work-life commitments, as she has a family

DEVICE USED

- Fetal Doppler
- BP machine
- Weighing machine
- Stethoscope

INTEREST

- Advocating for women's health issues in the community
- Participating in health education programs and workshops
- Engaging in research related to women's health and reproductive medicine

Priya Joshi

ABOUT

She is expecting her first child and lives with her husband, who is excited about this new journey. With supportive in-laws nearby, she appreciates the help and encouragement as she balances her career with motherhood.

AGE

28

OCCUPATION

Marketing Executive

LOCATION

Pune, Maharashtra

GOALS

- Maintain a healthy pregnancy for both herself and her baby
- Educate herself about childbirth and parenting
- Create a supportive environment for her growing family

CHALLENGES

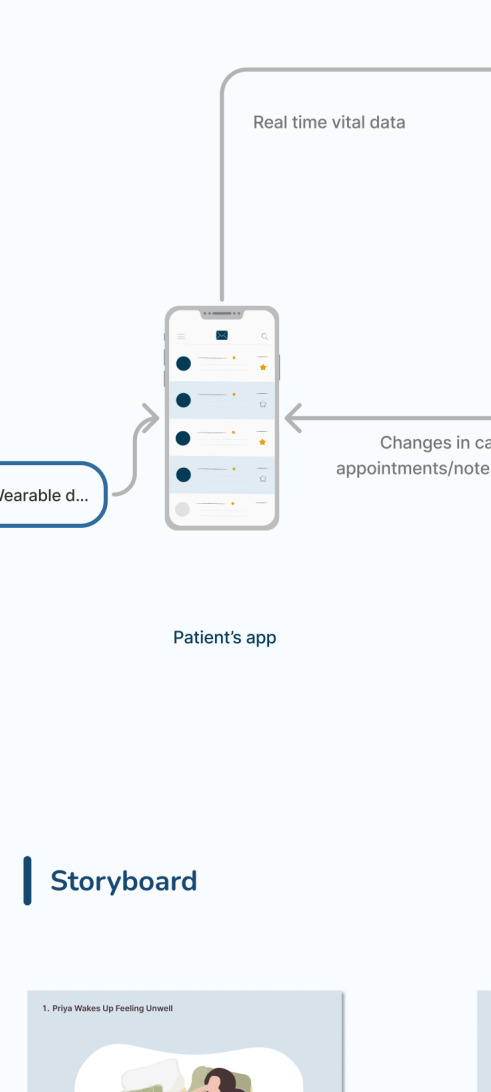

- Balancing work responsibilities with pregnancy-related fatigue
- Navigating mixed emotions about motherhood and changes in her body
- Managing family expectations and advice from relatives

HOBBIES

- Reading Books
- Writing
- Stethoscope

PERSONALITY TRAITS

- Positive and optimistic, but occasionally anxious about the future
- Organized and proactive in seeking information
- Values open communication with her healthcare provider

Susan Singh

ABOUT

She is a dedicated care coordinator who thrives in high-pressure environments where compassion and quick decision-making are equally important. She feels strongly about supporting expectant mothers during one of the most important journeys of their lives.

AGE

32

OCCUPATION

Care Coordinator

LOCATION

Pune, Maharashtra

GOALS

- Minimize delays in urgent patient care
- Help doctors maximize time spent on patient care rather than administrative tasks
- Enhance patient satisfaction through clear communication and timely updates

CHALLENGES

- Keeping patient records updated in real-time when multiple departments are involved
- Quickly getting doctors' attention for emergency approvals during busy hours
- Managing changes in doctors' schedules without creating patient confusion or long wait times

HOBBIES

- Cooking
- Nature walks

PERSONALITY TRAITS

- Organized and detail-oriented
- Empathetic and patient-focused
- Quick decision-maker under pressure
- Excellent communicator

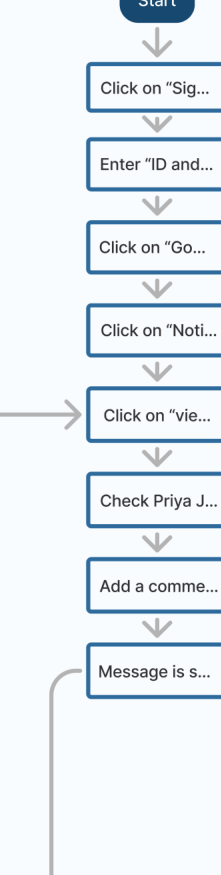

Insights

- Patients struggle with long wait times, frequent hospital visits, and complex diets, making time management difficult and increasing stress, which affects their well-being.
- Different healthcare professionals, like doctors, care co-ordinators, nurses, and radiologists, need to work together more smoothly to improve maternity care.
- Patients often struggle to book appointments since they lack personal contacts, making it harder to access care. Additionally, they find it difficult to quickly track and retrieve their medical data, as information is not easily accessible in their files.
- Care coordinators need an efficient way to access and share patient information, including medical history and current health status, ensuring that doctors have up-to-date details for effective decision-making.
- Coordinators require a simple process to relay doctors' suggestions to patients, especially when immediate consultations or follow-ups are necessary.

What each Interface Delivers

Maternity Patient's App

The maternity app offers real-time monitoring of the mother's vitals, health updates, baby growth info, and body changes. It provides access to reports, personalized care plans, daily medications, and pharmacy connections. The app enables appointment booking, milestone tracking, direct communication with the care team, and includes community groups for support during pregnancy and the baby's first year.

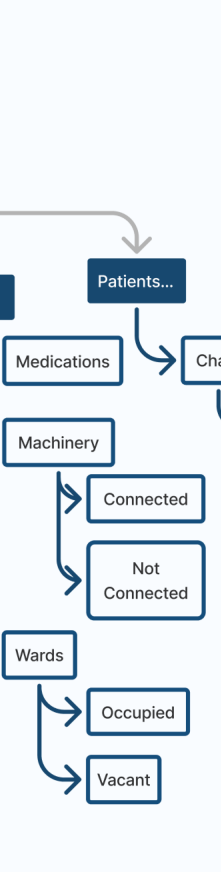

Care Coordinator Dashboard

The care coordinator dashboard would streamline patient care by centralizing patient overviews, tasks, doctor schedules, real-time vitals, care plans, medications, and alerts. It would enable quick access to up-to-date information, manage urgent tasks, track urgent cases, and coordinate with doctors promptly. Tools for managing schedules, inventory, wards, and pharmacy would ensure timely care and boost overall efficiency.

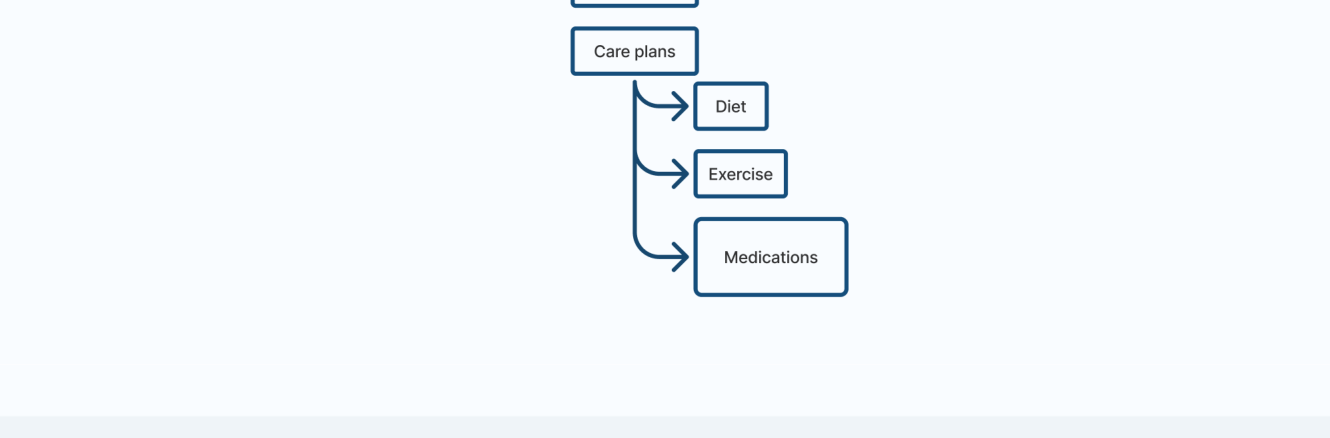

Maternity Doctor's App

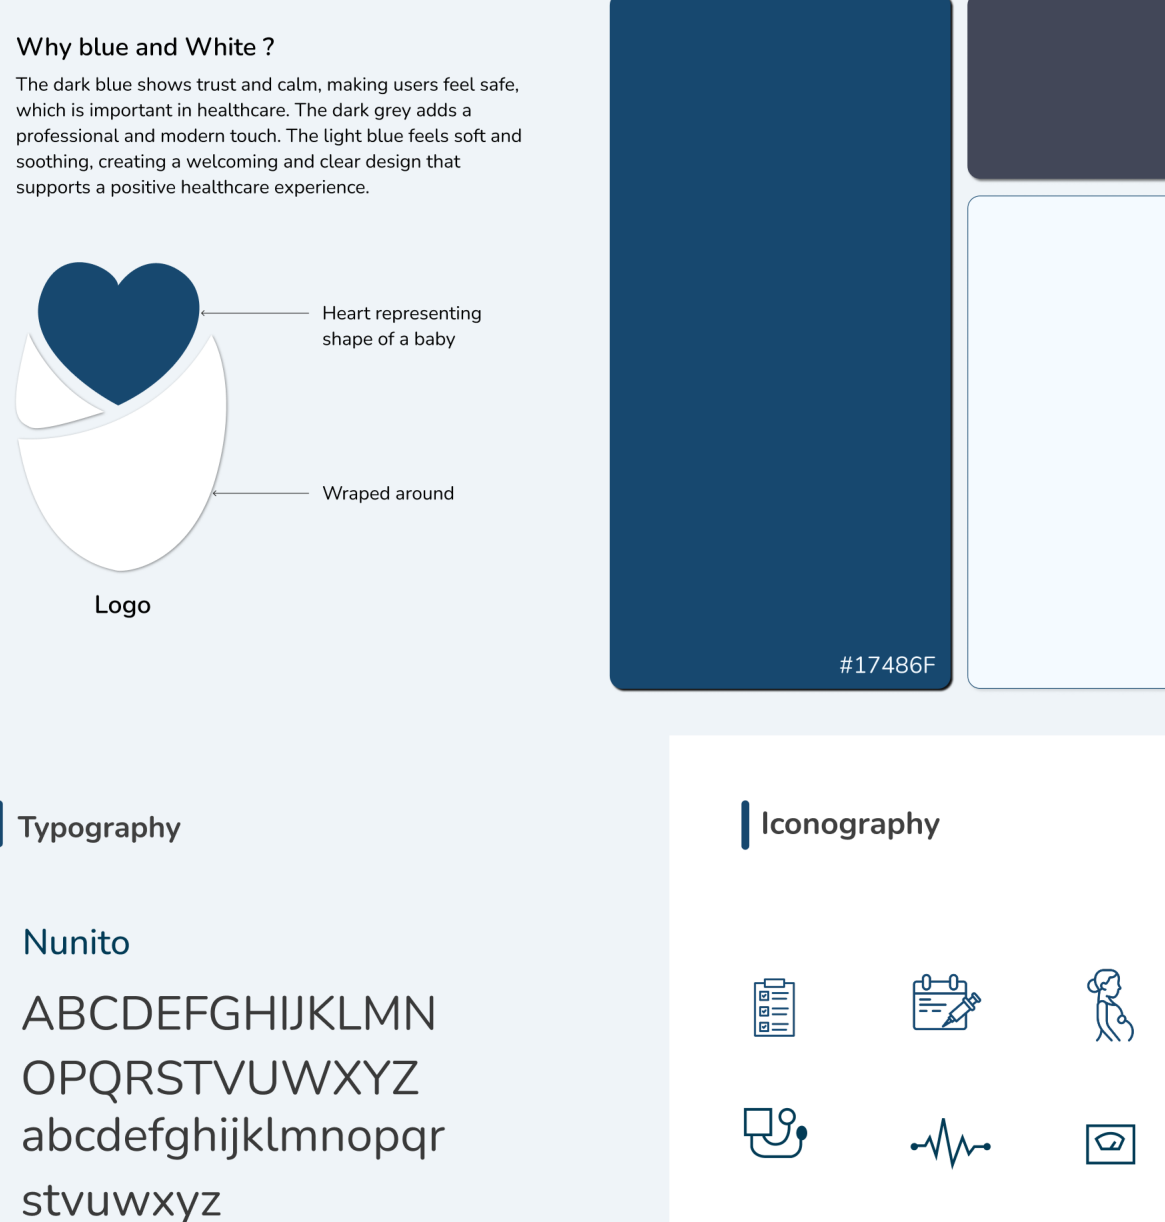

The doctor's app simplifies daily task management by displaying schedules, patient counts, and health scores. It offers quick access to medical histories, real-time emergency alerts, and easy approvals. Doctors can also communicate seamlessly with care coordinators for faster, smoother case handling.

User Flow

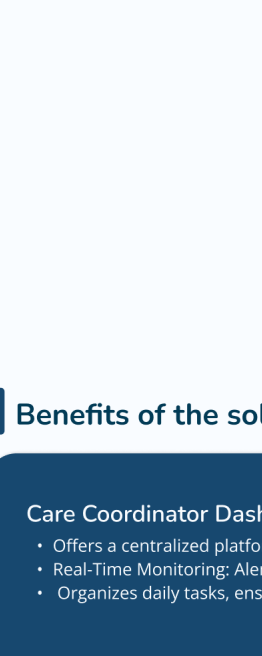

Information Architecture

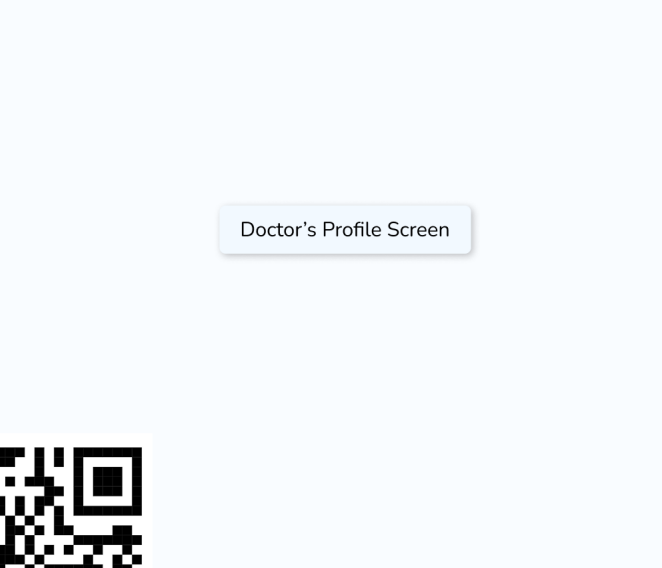

Design System

Why blue and White ?
The dark blue shows trust and calm, making users feel safe, which is important in healthcare. The dark grey adds a professional and modern touch. The light blue feels soft and soothing, creating a welcoming and clean design that supports a positive healthcare experience.
